                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 166. Application US/10892922

Publication No. US20050124569A1

GENERAL INFORMATION:
APPLICANT: APPLICANT: APPLICANT: Guerciclini, Roberto
APPLICANT: McSwiggen, James
TITLE OF INVENTION: RNA Interference Mediated Inhibition of CXCR4 Gene Expression
TITLE OF INVENTION: Using Short Interfering Nucleic Acid (sina)
FILE REFERENCE: 400-198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 73, Application US/10892922

Sequence 540, Application Vo. US20060124567A1

GENERAL INFORMATION:

APPLICANT: Sirna Therapeutics, Inc.

APPLICANT: McSwiggen, James

TITLE OF INVENTION: RNA INterference Mediated Inhibition of TRPM7 Gene Expression

TITLE OF INVENTION: RNA INTERFERENCE: 400/195 (WBHB04-535)

FILE REFERENCE: 400/195 (WBHB04-535)

FURRENT FILING DATE: 2004-07-01

Sequence 3732 Application US/10831901A

Publication No. US20050100885A1

GENERAL INCORMATION:
APPLICANT: Sampath, Bandarajan
APPLICANT: Excer, David J.
APPLICANT: Bangatajan
APPLICANT: Bangatajan
APPLICANT: Massire. Christian
APPLICANT: Massire. Christian
APPLICANT: Bangatajan
APPLICANTION: Compositions And Methods For The Treatment Of Severe
TITLE OF INVENTION: Acute Respiratory Syndrome (SARS)
FILE REFERENCE: ISIGOGOS-1-DO (BIOLOGOGUS)
CURRENT FILING DATE: 2003-01-26
FRIOR APPLICATION NUMBER: 60/466,426
FRIOR APPLICATION NUMBER: 60/466,527
